CITY OF WEST DES MOINES
STAFF REPORT COMMUNICATION

Meeting Date: January 2, 2024

ITEM: Microsoft DSM 42, 11100 Booneville Road – Approve Major Modification to Site Plan to allow construction of a data center building – Microsoft Corporation – MaM-006237-2023

Resolution: Approval of Major Modification to Site Plan

Background: Ryan Hardisty with Civil Design Advantage, on behalf of the applicant and property owner, Microsoft Corporation, requests approval of the Major Modification to Site Plan for the approximately 153-acre property located at 11100 Booneville Road. The applicant proposes to construct an approximately 245,000 square foot data center building with associated parking lot.

Staff Review & Comment:

- *Financial Impact:* As a part of a development agreement approved by City Council on April 19, 2021, for this site. The City will undertake the following proposed public use improvements:
  - Reconstruction of Booneville Road from S. 100th Street to S. 115th Street; and
  - Construction of S. Grand Prairie Parkway from Mills Civic Parkway to Raccoon River Drive; and
  - Extension of Grand Avenue from S. 88th Street to S. 115th; and
  - Extension of approximately one mile of Grand Avenue Trail from S. Grand Prairie Pkwy to the west boundary of the Urban Renewal Area.

  The proposed street improvements will include the installation of the associated utilities, streetlights and sidewalks.

- *Key Development Aspects:*
  1. *Parking Lot Landscaping*: The applicant is proposing to only plant shrubs within the landscape islands in the parking lot instead of the required trees and reduce the number of landscape islands due to security concerns. Also, the applicant is proposing to install gravel in areas around the parking lot and buildings where access to utility structures for maintenance purposes is necessary instead of planting grass. Grass will be planted between the main north/south access road and the parking lot. This was discussed with the Development & Planning Subcommittee as part of the requested approval of DSM 41 and was a compromise between the operational concerns and the code required landscaping (see Development & Planning Subcommittee bullet below). The City Council supported this approach as part of the site plan approval of DSM 41, which is the building directly north of this proposed data center building. The applicant has placed the required parking lot trees in the buffer areas surrounding the site. The areas of gravel in lieu of vegetation around the building's utility structures are screened from public view by the landscape buffer around the site. Staff believes these changes proposed to the landscaping on the site plan meet the intent of the code and are a reasonable accommodation for the specific operational requirements of this project. Recommended conditions of approval that these alternative methods be approved by the City Council have been added.

- *Traffic Impact Study Findings:* No traffic study was required of this Major Modification to Site Plan since a traffic study was already completed for this entire site, including the proposed building. Any modifications to surrounding streets required of the traffic study have been completed.

- *Development & Planning Subcommittee:* On December 19, 2022, the Development & Planning City Council Subcommittee discussed the use of gravel in and around the proposed parking lot and the omission of trees within the landscape islands in the parking lot for this site. The Subcommittee members were supportive of allowing shrubs to replace trees in the parking area in light of security concerns as presented by Microsoft's representative, waiving required landscape islands in the parking areas, and allowing partial use of gravel or paving near utilities for maintenance purposes while requiring the incorporation of vegetation to comply with code for the bulk of the landscaped areas adjacent to parking lots and any area visible from the perimeter of the site.

- *Vesting of Entitlement:* Per City Code, entitlement (approval to construct or implement) shall remain in effect so long as substantial site work has progressed beyond grading and completion of structural foundations and twenty-five percent (25%) of the total building area has occurred above grade within twenty-four (24) months of the effective date of the approval, unless a greater time period is authorized at time of the original entitlement, or by approval of an extension of the original entitlement. It is the responsibility of the developer to be aware of this deadline and request an extension of the approval prior to the expiration date.

Outstanding Issues: There are no outstanding issues.

Planning and Zoning Commission Action:

Date:	December 27, 2023
Vote:	6-0 for approval, with Commissioner Conlin absent
Recommendation:	Approval of Major Modification to Site Plan

Recommendation: Approve the Major Modification to Site Plan request, subject to the applicant meeting all City Code requirements, and the following conditions of approval:

1. The City Council agreeing to not require landscape islands in the parking lot as required by City Code due to security concerns with trees in the parking lot. Required parking lot trees shall be added to the buffer plantings.

2. The City Council allowing shrubs in lieu of trees to be planted within parking lot islands due to security concerns with trees in the parking lot. Required parking lot trees shall be added to the buffer plantings.

3. The City Council allowing gravel to be implemented around industrial buildings on the site to allow access to utility structures for maintenance purposes.
