# CITY OF WEST DES MOINES
# STAFF REPORT COMMUNICATION

**Meeting Date:** February 19, 2024

**ITEM:** Microsoft DSM 16, 1475 SE Maffitt Lake Road – Approve Major Modification to Site Plan to allow construction of a data center building – Microsoft Corporation – MaM-006298-2024

**Resolution: Approval of Major Modification to Site Plan**

**Background:** Bryan Dickerson with Navix Engineering, on behalf of the applicant and property owner, Microsoft Corporation, requests approval of the Major Modification to Site Plan for the approximately 124-acre property located at 1475 SE Maffitt Lake Road. The applicant proposes to construct an approximately 245,000 square foot data center building with associated parking lot.

**Staff Review & Comment:**

- *Financial Impact:* As part of the development agreement for this site, the City reconstructed and paved SE County Line Road from SE Soteria Avenue to Veterans Parkway with a pedestrian underpass on the Great Western Trail. As part of the street project, a water main was extended the full length of the street and a water main was installed from SE County Line Road up SE Soteria to former SE Maffitt Lake Road. The City installed a trail and streetlights on SE Soteria Avenue and a trail and streetlights on the north side of SE County Line Road. Previously constructed SE Maffitt Lake Road between Veterans Pkwy and SE Soteria Ave was removed and the right of way for SE Maffitt Lake Road vacated and obtained by the applicant.

- *History:* The Preliminary Plat for this site (Ginger East) was approved by the Planning and Zoning Commission on June 14, 2021, and the City Council on June 21, 2021. The Final Plat was approved by the City Council on September 7, 2021. The first data center building on this site (DSM 14) was approved by the City Council on September 20, 2021. The second data center building (DSM 15) was approved by the City Council on May 1, 2023, and is currently under construction. A total of 5 data center buildings are anticipated for this site. These buildings were noted on the preliminary plat and the site plan for the first building (DSM 14) and the successive buildings have been consistent with these approved plans in placement, size, and exterior design.

- *Key Development Aspects:*
    1. The applicant is proposing to reduce the number of landscape islands and only plant shrubs within the landscape islands in the parking lot instead of the required trees due to security concerns. Also, instead of planting grass, the applicant is proposing to install gravel in areas around the parking lot and buildings where access to utility structures for maintenance purposes is necessary. Grass will be planted between the main north/south access road and the parking lot. These changes were discussed with the Development & Planning Subcommittee as part of the requested approval of DSM 15 and was a compromise between the operational concerns and the code required landscaping. The City Council supported this approach as part of the site plan approval of DSM 15, which is the building directly north of this proposed data center building. The applicant has placed the required parking lot trees in the buffer areas surrounding the site. The areas of gravel in lieu of vegetation around the building's utility structures are screened from public view by the landscape buffer around the site. Staff believes these changes proposed to the landscaping on the site plan meet the intent of the code and are a reasonable accommodation for the specific operational requirements of this project. Recommended conditions of approval that these alternative methods be approved by the City Council have been added.

- *Traffic Impact Study Findings:* No traffic study was required of this Major Modification to Site Plan since a traffic study was already completed for this entire site, including the proposed building. Any modifications to surrounding streets required of the traffic study have been completed.

- *Development & Planning Subcommittee:* On December 19, 2022, the Development & Planning City Council Subcommittee discussed the use of gravel in and around the proposed parking lot and the omission of trees within the landscape islands in the parking lot for this site. The Subcommittee members were supportive of allowing shrubs to replace trees in the parking area in light of security concerns as presented by Microsoft's representative, waiving required landscape islands in the parking areas, and allowing partial use of gravel or paving near utilities for maintenance purposes while requiring the incorporation of vegetation to comply with code for the bulk of the landscaped areas adjacent to parking lots and any area visible from the perimeter of the site.

- *Vesting of Entitlement:* Per City Code, entitlement (approval to construct or implement) shall remain in effect so long as substantial site work has progressed beyond grading and completion of structural foundations and twenty-five percent (25%) of the total building area has occurred above grade within twenty-four (24) months of the effective date of the approval, unless a greater time period is authorized at time of the original entitlement, or by approval of an extension of the original entitlement. It is the responsibility of the developer to be aware of this deadline and request an extension of the approval prior to the expiration date.

**Outstanding Issues:** There are no outstanding issues.

## DISCHARGE POINT SUMMARY

STORM WATER WILL FLOW OVERLAND TOWARDS INTAKES/STORM SEWER THAT DISCHARGE INTO A DETENTION/TEMPORARY SEDIMENT BASINS. WATER IS OUTLETTED FROM THE BASINS INTO CULVERTS UNDER S. COUNTY LINE RD. TO DRAINAGE SWALES FLOWING TO AN EXISTING POND. EVENTUALLY DISCHARGES INTO AN UNNAMED TRIBUTARY OF MIDDLE CREEK.

## STORMWATER MANAGEMENT

THE STORMWATER MANAGEMENT PLAN MUST IDENTIFY THE SELECTED MEASURES THAT WILL BE INSTALLED DURING CONSTRUCTION TO CONTROL POLLUTANTS IN STORMWATER DISCHARGES THAT WILL OCCUR AFTER CONSTRUCTION HAS BEEN COMPLETED. AFTER THE PROJECT IS COMPLETED AND FINAL STABILIZATION IS REACHED, THE SITE'S CAPACITY FOR EROSION MUST BE DETERMINED. A GOAL OF 80% REMOVAL OF SEDIMENT SHOULD BE USED IN DESIGNING AND INSTALLING STORMWATER MANAGEMENT PRACTICES. PERMANENT CONTROLS MAY BE NEEDED TO CONTROL EROSION FROM THE SITE. INCREASED RUNOFF FROM THE SITE MAY CAUSE INCREASED EROSION DOWNSTREAM. VELOCITY DISSIPATION DEVICES SHALL BE PLACED AT THE DISCHARGE LOCATION AND ALONG THE LENGTH ON ANY OUTFALL GRASS CHANNEL AS NECESSARY TO PROVIDE A NON–EROSIVE FLOW FROM THE STRUCTURE TO A RECEIVING WATERCOURSE.

## INSPECTION AND MAINTENANCE

ONCE A WEEK AND WITHIN 24 HOURS AFTER A 0.5 INCH RAINFALL EVENT, EROSION AND SEDIMENT CONTROL PRACTICES MUST BE INSPECTED. THE PRACTICES SHOULD BE PROPERLY MAINTAINED AND RECORDS SHOULD BE KEPT. IF AN EXISTING PRACTICE IS NOT WORKING, CONTINUED USE OF THAT PRACTICE SHOULD BE RE–EVALUATED.

WEEKLY EROSION AND SEDIMENT CONTROL INSPECTIONS WILL BE SENT TO THE CITY AT SWPPP@DM.IOWA.GOV.

## RECORD KEEPING

RECORDS OF LAND–DISTURBING ACTIVITIES SHOULD BE KEPT TO DETERMINE WHICH AREAS NEED TO BE STABILIZED. RECORDS ON THE MAINTENANCE AND INSPECTION OF EROSION AND SEDIMENT CONTROL PRACTICES MUST BE KEPT.

## RUN-ON CONTROLS:

1. DIVERT OFF–SITE STORMWATER (RUN–ON) OR GROUND WATER AWAY FROM SLOPES AND DISTURBED AREAS WITH INTERCEPTOR DIKES, PIPES, AND/OR SWALES. OFF–SITE STORMWATER SHALL BE MANAGED SEPARATELY FROM STORMWATER GENERATED ON THE SITE.
2. TO THE DEGREE POSSIBLE, RUN–ON FROM THE UNDISTURBED AREAS SHALL BE DIVERTED FROM THE DISTURBED AREAS OF THE CONSTRUCTION SITE TO MINIMIZE THE AMOUNT OF AREA DRAINED FOR WHICH CONTROLS MUST BE PROVIDED.

## STABILIZATION PRACTICES

STABILIZATION OF DISTURBED AREAS MUST, AT A MINIMUM, BE INITIATED IMMEDIATELY WHENEVER ANY CLEARING, GRADING, EXCAVATING OR OTHER EARTH DISTURBING ACTIVITIES HAVE PERMANENTLY CEASED ON ANY PORTION OF THE SITE, OR TEMPORARILY CEASED ON ANY PORTION OF THE SITE AND WILL NOT RESUME FOR A PERIOD EXCEEDING 14 CALENDAR DAYS. IN DROUGHT–STRICKEN AREAS AND AREAS THAT HAVE RECENTLY RECEIVED SUCH HIGH AMOUNTS OF RAIN THAT SEEDING WITH FIELD EQUIPMENT IS IMPOSSIBLE AND INITIATING VEGETATIVE STABILIZATION IMMEDIATELY IS INFEASIBLE, ALTERNATIVE STABILIZATION MEASURES MUST BE EMPLOYED AS SPECIFIED BY THE DEPARTMENT. IN LIMITED CIRCUMSTANCES, STABILIZATION MAY NOT BE REQUIRED IF THE INTENDED FUNCTION OF A SPECIFIC AREA OF THE SITE NECESSITATES THAT IT REMAIN DISTURBED.

TEMPORARY STABILIZATION – TEMPORARY EROSION CONTROL MEASURES INCLUDE TEMPORARY SEEDING, MULCHING, GEOTEXTILES, ETC.

PERMANENT STABILIZING – PLANNED VEGETATION OR STRUCTURAL MEASURES MUST BE INSTALLED TO PERMANENTLY PREVENT A CONSTRUCTED AREA OR FINISHED SITE FROM ERODING.

SEE IOWA CONSTRUCTION SITE EROSION CONTROL MANUAL, TABLES 1.3–1.5 FOR ACCEPTABLE METHODS.

## DEWATERING

DEWATERING DISCHARGES FROM DEWATERING ACTIVITIES, INCLUDING DISCHARGES FROM DEWATERING OF TRENCHES AND EXCAVATIONS, ARE PROHIBITED UNLESS MANAGED BY APPROPRIATE CONTROLS.

## STRUCTURAL SEDIMENT CONTROL

IF THE AREA IS 10 OR MORE ACRES AND THERE IS A COMMON DRAINAGE WAY, A SEDIMENT BASIN WITH A HOLDING CAPACITY OF 3,600 CUBIC FEET PER ACRE DRAINED (INCLUDING OFF–SITE AREA DRAINAGE) IS TO BE PROVIDED. IF A SEDIMENT BASIN IS NOT FEASIBLE, COMPARABLE EROSION CONTROL MEASURES ON THE DOWNSLOPE AND SIDESLOPES OF THE PROJECT PERIMETER ARE TO BE PROVIDED. FOR DRAINAGE LOCATIONS SERVING 10 OR FEWER ACRES, STRUCTURAL CONTROLS ARE REQUIRED FOR ALL SIDESLOPE AND DOWNSLOPE BOUNDARIES OF THE CONSTRUCTION AREA OR A SEDIMENT BASIN PROVIDING STORAGE FOR 3,600 CUBIC FEET OF STORAGE PER ACRE DRAINED MUST BE PROVIDED.

## STABILIZATION QUANTITIES
